Modified SVX Strut Mounts

If you encounter a complaint of a knocking noise from the front of a Subaru SVX when driving over bumps, it may be necessary to install a set of modified strut mounts. Be sure to eliminate all other possibilities first, however.

The modified part is available under Part Number 20320PA011. Two must be installed because these strut mounts must be installed as a set. The procedure for transfer of the modified strut mounts remains the same as described in Section 4-1 of the 1992 Subaru SVX Service Manual.
